PROFILE

Newly graduated DevOps Engineer (June 2026). During my internship at Cloudist I built a GitOps-based Internal Developer Platform for observability on Kubernetes, using FluxCD, Kustomize, Helm and the LGTM stack. Since graduating I have kept building: right now Polaris, a local platform for delivering and observing an AI service with Argo CD, Helm across three environments, a CI pipeline with image scanning and SBOM, and Prometheus, Loki and Grafana. I write down what broke and how I fixed it, not only what worked. I don't have production on-call experience at a larger company yet, but I learn fast and I'm comfortable in the terminal. Before IT I worked as a career counsellor in two municipalities and ran my own company, so I'm used to coordinating people, explaining things clearly and owning my work. I'm looking for a junior DevOps, Platform or SRE role.

EXPERIENCE

Platform Engineer Intern (LIA) | Cloudist AB, Malmö Jan 2026 – May 2026

- Designed, built and documented a GitOps-based Internal Developer Platform for observability on Kubernetes (Virtuozzo).
- Set up a production-oriented LGTM stack: Prometheus, Loki, Tempo, Grafana and Alertmanager, with self-monitoring.
- Secure external access with Traefik Ingress, cert-manager and Let's Encrypt, with Basic Auth on all endpoints.
- Multi-environment setup (base/staging/production) with Kustomize overlays and Helm, reconciled by FluxCD.
- Windows server monitoring with Windows Exporter and Grafana Alloy (push over outbound HTTPS).
- Kept secrets out of Git (Kubernetes Secrets, Keeper). Wrote a 63-page thesis on the architecture and decisions.

Founder | Syvbyrån (own company) Jul 2023 – Jun 2024

- Founded and ran a consultancy focused on career development and data analysis.

Career Counsellor / Labour Market Coordinator | Alvesta Municipality (Alvesta Gymnasium) Aug 2022 – Jul 2023

- Guided students and adults on education and work, and coordinated with the Public Employment Service, CSN and the Swedish National Agency for Higher Vocational Education.
- Introduced Scrum/Kanban in the team's way of working.

Career Counsellor | Uppvidinge Municipality 2020 – 2022

- Made individual study plans for 100+ adults and young people in adult education, the introduction programme and SFI, many of them newly arrived.

Sales Assistant | Pressbyrån 2012 – 2015

- Store operations, stock and customer service; named one of the best sellers in southern Sweden.

SELECTED PROJECTS

Polaris AI Platform – GitOps platform for an AI service Sep 2026 – ongoing

- FastAPI service packaged as a non-root image, scanned with Trivy and shipped with an SBOM; one Helm chart deployed to dev, staging and prod on k3d.
- GitOps with Argo CD from a separate config repository (app-of-apps): dev and staging sync automatically, prod is promoted by a manual sync. Self-healing verified live.
- GitHub Actions CI with six jobs: tests, secret scan (gitleaks), dependency audit, workflow lint, image build/scan with a deploy test in a throwaway k3d cluster, and publish to GHCR.
- Metrics and logs in Prometheus, Loki and Grafana via OpenTelemetry. Every bug I hit is written up with root cause in ADRs and a troubleshooting guide.
→ github.com/arash00009/polaris-ai-platform

Flux Observability Platform – thesis project 2026

- The thesis stack as a public repo: FluxCD bootstraps Traefik, Prometheus, Alertmanager, Loki (via Fluent Bit), Tempo (OTLP) and Grafana from Git.
- Documented real fixes, e.g. Tempo in CrashLoopBackOff (solved by pinning the chart) and Loki returning 502 (solved with SingleBinary mode).
→ github.com/arash00009/flux-observability-platform

HiveBox – End-to-end GitOps pipeline

2026

- Seven-phase pipeline: Flask REST API → Docker → GitHub Actions → Kubernetes → Helm → Argo CD, with Valkey caching, MinIO storage and Prometheus metrics.
- Changes merged to main are synced to the cluster by Argo CD, with no manual kubectl or helm commands.
→ github.com/arash00009/End-to-End-hand-on-project

Terraform Kubernetes Platform (IaC + GitOps)

Aug 2026

- Kind clusters provisioned with modular Terraform, separate dev/prod state in HCP Terraform, and FluxCD syncing apps from a separate Git repository.
→ github.com/arash00009/terraform-k8s-platform

OpenShift projects (Lernia)

2025 – 2026

- Three-tier guestbook (Nginx, Go, PostgreSQL, Redis) with Secrets, PVC and HPA; CI in GitHub Actions and CD with Argo CD (auto-sync, self-heal, least-privilege RBAC).
→ github.com/arash00009/guestbook-CICD

EDUCATION

Higher Vocational Diploma – DevOps Engineer (400 HVE credits) | Lernia YH

2024 – 2026

Thesis: Internal Kubernetes-based Developer Platform for Observability (GitOps, FluxCD, LGTM)

BA in Sociology, Political Science orientation (180 ECTS) | Linnaeus University, Växjö

2017 – 2020

Qualitative and quantitative methods, data analysis, academic writing

TECHNICAL SKILLS

Kubernetes & containers: Kubernetes, OpenShift, k3d, kind, Docker, Podman, Deployments, Services, Ingress, ConfigMaps, Secrets, PVC, HPA, RBAC, NetworkPolicy

GitOps & CI/CD: FluxCD, Argo CD, Helm, Kustomize, GitHub Actions, GitLab CI, Git, GHCR

IaC: Terraform (modules, remote state, HCP Terraform, dev/prod environments)

Observability: Prometheus, Grafana, Loki, Tempo, Alertmanager, Grafana Alloy, Fluent Bit, OpenTelemetry

Linux: RHEL, Bash, systemd, SSH, SELinux, LVM, journalctl, NetworkManager

Networking & security: TCP/IP, DNS, CIDR, NAT, TLS, Traefik, cert-manager, Let's Encrypt, Trivy, SBOM, gitleaks

Cloud: AWS and Azure fundamentals (IAM, VPC/VNet, EC2, S3)

Development & data: Python, Flask, FastAPI, REST, pytest, flake8, PostgreSQL, Redis/Valkey, MongoDB, MinIO

Ways of working: Scrum, Kanban, GitOps principles, documentation

COURSES & CERTIFICATION

- Certified Kubernetes Administrator (CKA) – in progress (LFS258), exam not yet booked
- Red Hat Academy (courses): RH124, RH134, DO180, DO188
- AWS Academy Cloud Foundations
- Azure AZ-900 and AZ-104 (course modules, exams not taken)

LANGUAGES

Swedish (fluent) | English (fluent) | Dari (native) | Swedish citizen
